Subject: Intercontinental Terminals Co Fire - Site Containment

Adam, here is some information regarding our disaster response site containment solution for the Deer Park Port Fire. Posi-Shell® EC can be sprayed-on aerially or via trucks onto the burned debris to prevent the movement of ash and toxins from being carried away by stormwater or wind. The system will also help minimize air emissions. I can be in Houston tomorrow if you would like to set up a meeting.

Posi-Shell® EC has been used on many disaster areas after fires and is used by the EPA at many superfund sites throughout the US. We can mobilize a team in 3 days.
